

# PEAKFLOW PUMPS START-UP GUIDE

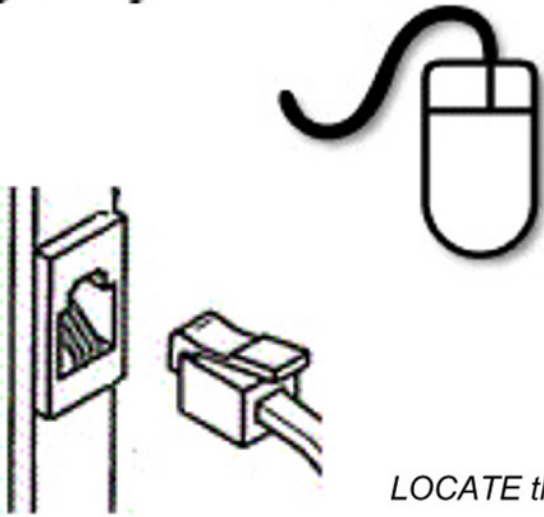

Congratulations! You have just purchased the most sophisticated battery back-up system on the market today. Your next steps will ensure that your system offers you the optimal protection you deserve.

## CONNECT UNIT TO A PHONE JACK-

**YOUR NOTIFICATION FEATURES  
WILL NOT FUNCTION WITHOUT DOING SO**

Since the ePump is connected to a working phone line, run a manual test (press & hold function display button until "T" appears) to check that the ePump recognizes the phone line. If so, turn on "Phone Line Monitoring"- press & hold function display button until "M" appears, then toggle with button from "N" to "Y". Allow screen to return to normal.

## REGISTER YOUR SYSTEM-

*LOCATE the serial number (white label on back of unit)-*

*LOG ON to [www.peakflowpumps.com](http://www.peakflowpumps.com)*

*click 'CLIENT LOGIN' (top of page); click 'NEW REGISTRATION'*

*FILL IN all info; serial number, phone numbers & email addresses  
you want notified in case of emergency-*

*SELECT user name & password; click 'Register'*

**PRINT OUT REGISTRATION INFO & STORE IN HOMEOWNER'S RECORDS!**

## READ YOUR OWNER'S MANUAL & print it for future reference

## HOW TO STOP UNIT FROM BEEPING:

If it is beeping because of power outage or pump activation, you may silence it for 24 hours by press/hold the function display button until 'S' appears. Let go and the unit won't beep for those two reasons for 24 hours. Note; if you clear the alarm instead by selecting 'C', the unit will start beeping (and notify) again when the same error occurs

If it is beeping for any other reason, you may correct the error OR disable the alarm for 5 days by press/hold the function button until 'D' appears. Let go and the ePump will not beep for any reason for 5 days.
